

**ULI Idaho Brown Bag Series:
Sustainable Agriculture: Measuring Success**

What if agriculture was more profitable, would less farm land be maintained? Would that influence more sustainable patterns of land development?

What if public policy had metrics for determining the sustainability of the local food economy and the region's contribution in supporting local food? Would that support more sustainable patterns of land development?

Over the past six months a research project funded by the Urban Land Institute (ULI) Foundation addressed these questions. This Brown Bag program will present the findings from the research with discussion including the partners: ULI Idaho, the University of Idaho, Boise State University, Idaho Smart Growth, and the Idaho Center for Sustainable Agriculture.

DATE, TIME AND LOCATION

Thursday January 26, 2012

11:30 networking and lunch

Noon - 1 pm Program

**The Idea Center at the
WaterCooler**

14th and Idaho Streets, Boise
